

```

16     status: 'DELIVERED' as ListingStatus,
17     updatedAt: serverTimestamp(),
18   });
19 }
20
21 export async function cancelListing(
22   listingId: string
23 ): Promise<void> {
24   const ref = doc(db, 'listings', listingId);
25   await updateDoc(ref, {
26     status: 'CANCELLED' as ListingStatus,
27     updatedAt: serverTimestamp(),
28   });
29 }

```

Listing 8.15: Listing Workflow (firebase-service.ts)

Each function targets a specific listing document by ID and atomically updates both the status field and the updatedAt timestamp. The status transitions follow a strict sequence: OPEN → ASSIGNED → IN_TRANSIT → DELIVERED → RECYCLED, with CANCELLED available from any active state.
